# Azure Data Explorer web UI keyboard shortcuts

Article • 03/17/2023 • 2 minutes to read

Keyboard shortcuts provide a quick way to navigate websites, and allow users to work more efficiently. Instead of using a pointing device, you use keys, or combinations of keys, to run tasks. This article lists Windows keyboard shortcuts that work in the Azure Data Explorer web UI query editor window and results viewer.

In the query editor, select `F1` to view a list of keyboard shortcuts in the command palette.

The letters that appear below represent letter keys on your keyboard. For example, to use `G`+`N`, hold down the `G` key and then press `N`. If the command is `Ctrl`+`K` `Ctrl`+`X`, keep pressing `Ctrl`, and simultaneously press `K` and then `X`.

## Query editor

| To do this action | Press |
|---|---|
| Show command palette | `F1` |
